Product Data Sheet

Poly-L-lysine (70,000-150,000)

Catalog #	Source	Reactivity	Applications
CRG4003			

Description	Mol Wt 70,000-150,000 Da
Form	Powder
CAS Number	25988-63-0
Application	Poly-L-lysine polymers can be used in promoting cell adhesion to solid substrates, conjugation to methotrexate for increased drug transport, microencapsulation of islets, cell microencapsulation technology, microarray glass slide coating, and chromosomal preparations. Lower molecular weight poly-L-lysine is less viscuous in solution, but higher molecular weight versions provide more attachment sites per molecule.
Storage/Stability	Shipped at 4°C. Store at -20°C for 2 years.
